English (B2) | German (A1)

Hello! I'm Javi. A young full-stack developer from Spain. My greatest expertise lies in software development. Experienced in React, Typescript & JavaScript on the frontend and Java with Maven projects on Google Cloud as a backend developer, along with development in Next.js. Although being in a very large company, we were a small team managing a lot of volatility and a changing environment. Because of this, it was necessary to be versatile; therefore, I also have intermediate experience in other technologies listed below, maybe I'm not an expert on those technologies, but I'm an expert resolving problems whatever it costs.

EDUCATION

Higher Technical School of Computer Engineering

Granada, Spain

Bachelor's Degree in Computer Science and Engineering; GPA: 7.9

January 2013 - June 2017

Honors in development, server & data analysis subjects. (Transcript of records available below)

Madrid, Spain

June 2020 – June 2022

IMF Business School – Nebrija University

Master in Business Administration (MBA) specialized in Digital Marketing; GPA: 8.7

(I learnt to understand the NEEDs of the business, the priorities and to have better communication with them, for being able to give them the solutions they want and manage resources and plannifications as well)

SKILLS SUMMARY

- **Languages:** Javascript, Typescript, Java, HTML, CSS, Python, PHP, SQL, BASH, Yaml
- **Frameworks:** React, Angular, Vue.js, Nextjs, OSGI, Express
- **Libraries** Tanstack-query, Tailwind
- **Tools:** Webpack, Vite, Maven, Babel, Jira, Bitbucket, Confluence, Git, GTM, Cypress. BigQuery, Postman
- **Plattforms:** VS Code, IntelliJ IDEA, Google Cloud Plattform, Adobe Experience Manager, NPM, BIT, DynaTrace
- **Soft Skills:** Abstraction from low to high level, Efficient reporting & communication, Rapport Building, People management, fast & curious learner.

WORK EXPERIENCE

FULL STACK DEVELOPER | TELEFONICA

July 18 – August 25

- Complete frontend e-commerce in Angular.js with the integration of the new in-house catalogue.

- Full-stack call tracking project hosted in GCP with 96% of trazability and <1% error rate.
- Development of a global CMS based on React apps supported by GCP infrastructure from scratch. Architectural design of the infrastructure, design and development of frontend applications, design of data models and API interfaces that served the information.
- Optimization of front-end applications to reach 100% lighthouse performance (code chunk, pre-rendering...), migration to Next.js technology
- Technical lead of the integration of Adobe Experience Manager (CMS) in the Telefonica Ecosystem.

WEB DEVELOPER | VICERRECTORATE OF INTERNATIONALIZATION. UNIVERSITY OF GRANADA Oct 17 – June 18

- Design and normalization of relational databases for student enrollment in volunteer scholarships.
- Design and development of the front-end forms with PHP & Javascript

PROJECTS (Ask for details if needed)

- **Full-Stack Call Tracking System. (Frontend integration with cloud hosted APIs to make the E2E call tracking system)** - Java, Javascript, Webpack, Maven, GCP, SQL. Strong emphasis on architecture.
- **Headless CMS in house (Frontend apps hosted in GCP connecting with GCP APIs)** - Reactjs, Nextjs, CI/CD, Pipelines, Webpack, Maven, Google Cloud Plattform, Typescript, Redux/Saga, Swagger, bit, npm..)
- **ADOBECMS (Integration & evolution from Scratch)** - Scrum master & technical lead of: Java, OSGI, Javascript, Webpack, Maven, Cloud, Dynatrace
- **My own projects (Actively working on them):** [Github](#)
